

Monasterium Laboratory
Skin & Hair Research Solutions

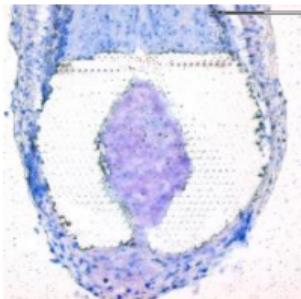

Provides state-of-the-art skin and hair research preclinical and clinical services

Before LCM

After LCM

NEW SERVICE AVAILABLE:

LASER CAPTURE MICRODISSECTION

This **PALM MicroBeam** technology allows **uncontaminated specimen collection** from **specific compartments of skin and hair follicles** for RNA, DNA, and protein isolation.

Our expert technicians provide a fast, efficient and trouble-free **LASER CAPTURE MICRODISSECTION** service for the precise and reproducible isolation of specific cells or defined tissue compartments to generate meaningful, instructive, and prominently publishable profiling data on RNA, DNA or protein expression.
