

Differences between Define-XML 1.0 & Define-XML 2.0

New ODM 1.3.2 infrastructure
Clarification that reviewers can view Define-XML in multiple ways
New enumerated item capability
Ability to link to standardized Controlled Terminology & non-standard terms
Extensive linking of variables to specific pages in an annotated CRF
Clear description of how the standards should be used
Fully describes values for any variable in datasets and enhances machine readability
Clearly defines what extensions are and how they should be used
Now describes how split domains should be represented
